Last Updated Sunday, 20 April 2008

This version adds support for any version of Trainz* and an option to view miles instead of meters.

This tool is built using Java, so you need a Java VM (virtual machine) to run this tool.

I recommend Java Runtime Edition (5.0 or above). If you do not have it, get it at www.java.com. Download Trainz Tuner 1.3 *Any version of Trainz, as long as it has the same structure of Trainz Railroad Simulator (TRS2004): it must have a "tuning.dat" file in the "Settings" folder, and an options file named "trainzoptions.txt" or "trainzclassicoptions.txt"
